

More than 45 students turned up in the workshop :) This time, students was only from 12th standard from 3 schools which was invited by me on 27th August at 4-5 pm. It was one hour workshop, but I extended the workshop to 1.5 hours to tell more.

Workshop started with "Discussion between proprietary Softwares and Free/Open Source Softwares", the discussion consumes around 35 minutes as students was really interested in this topic, I thought that was the best starting which I had in the workshops.

Than I started to tell about the "Web Browser", Web Browsers which are free/open source, than I switched over to Firefox talk.

I have told some cool features of Firefox to the students, as projector is not available with me, so I tell some cool add-ons too to the students but can't provide them live demo :(

I have also translated some ways for the students to get involved in Mozilla and we hope to get some of them to actually join us in the near future.

As this time I didn't have any Firefox Goodies, so I can't able to give it to the students :(

After over one hour, we had BOF session too, in which students cleared there doubts.
